* This table includes all types of defined contribution plans; the term 401(k) is used for simplicity.

** Reduced match, rather than fully suspended match.

Sources: Match suspension information is from news sources, SEC filings, and employers. Participant numbers are from U.S. Department of Labor Form 5500 data for 2018.

Putting Our Match Suspension Numbers into Context

Our compilation of match suspensions relies on several sources: major corporate newswires, companies' quarterly SEC filings, Google searches, and social media. Any reported suspension is then verified through either a press release or a direct email response from the company.

Of course, not all match suspensions are captured by this process. For example, industry data suggest that between 5 and 20 percent of firms have suspended their match since the pandemic, while our data on plan sponsors show less than 1 percent of firms have suspended. (For data on plan sponsors, we use the Department of Labor's Form 5500 for plans with 100+ participants).

Clearly, the larger the company the more likely the suspension would be reported in the press. For larger plans – 5,000+ participants – we find that 2.3 percent of sponsors suspended their match (see Table 1), which is similar to the 3.4 percent reported for the same size firms in a [recent industry survey](#). Thus, it appears that our data are doing a reasonable job of capturing large firm activity. Much of the additional count comes from smaller employers, whose compensation changes do not make the news.

TABLE 1. CRR SAMPLE OF EMPLOYER MATCH SUSPENSIONS IN 2020 AS A SHARE OF FORM 5500 SPONSORS AND PARTICIPANTS

Plan size	Sponsors			Participants		
	Match suspended	Total	Percentage	Match suspended	Total	Percentage
100+	104	59,374	0.2%	1,011,549	64,919,384	1.6%
1,000+	92	8,438	1.1	1,004,677	50,487,364	2.0
5,000+	44	1,894	2.3	884,646	37,749,388	2.3

Note: 5500 data are for 2018.

Finally, comparing our results – based on the same methodology – [for the Great Recession](#) and the pandemic suggests that match suspensions are not as important this time around (see Table 2).

TABLE 2. CRR MEASURE OF PLANS AND PARTICIPANTS AFFECTED BY MATCH SUSPENSIONS, 2008/2009 AND 2020

Plan size	Percentage of sponsors		Percentage of participants	
	2008/2009	2020	2008/2009	2020
100+	0.4%	0.2%	4.3%	1.6%
1,000+	2.3	1.1	5.5	2.0
5,000+	5.2	2.3	6.8	2.3

Note: 2008/09 calculations use 5500 data for 2009; and 2020 calculations use 5500 data for 2018.
